

Google Ads API Tool — Design Document

PhoneSpot (phonespt.co.kr) | Internal Ad Reporting Integration
Manager Account (MCC): 396-470-5146 | Document version 1.0

1. Tool Overview

PhoneSpot is a mobile phone retail business in South Korea. We operate Google Ads Search and Display campaigns to generate local customer inquiries through KakaoTalk chat and phone calls. This tool is an **internal, read-only reporting integration** that automatically pulls our own campaign performance metrics from the Google Ads API once per day and writes them into a Google Sheets reporting dashboard. The metrics are combined with Google Analytics 4 (GA4) conversion data to calculate cost-per-inquiry (CPL) per campaign and ad group.

The tool **does not create, edit, pause, or manage** any campaigns, budgets, or creatives. It only retrieves reporting metrics (impressions, clicks, cost) for accounts that we own and manage under our own MCC.

2. Users and Access

The tool is used **exclusively by internal employees** of PhoneSpot. There are no external users, clients, or public access. The tool runs inside our own Google Workspace / Google Sheets environment and is not distributed or resold.

3. System Architecture

The integration is built with Google Apps Script bound to an internal Google Sheets spreadsheet. The daily data flow is:

- 1 Google Apps Script time-based trigger fires once daily (02:25 KST).
- 2 The script exchanges a stored OAuth2 refresh token for a short-lived access token (oauth2.googleapis.com/token).
- 3 The script sends one GAQL query to the Google Ads API (GoogleAdsService.SearchStream) for our own ad account.
- 4 The API returns daily ad-group level reporting rows (date, campaign name, ad group name, impressions, clicks, cost).
- 5 The script writes these rows into the spreadsheet and combines them with GA4 conversion data already present in the sheet.

4. Google Ads API Usage

Item	Detail
Service / Method	GoogleAdsService.SearchStream (REST searchStream); CustomerService.listAccessibleCustomers
Resources queried	ad_group, campaign, customer
Metrics retrieved	metrics.impressions, metrics.clicks, metrics.cost_micros
Segments	segments.date
Write operations	None (read-only reporting; no mutate calls)
Conversion upload / Remarketing	Not used

Sample GAQL query:

```
SELECT segments.date, campaign.name, ad_group.name, metrics.impressions, metrics.clicks, metrics.cost_micros  
FROM ad_group WHERE segments.date BETWEEN " AND " AND metrics.impressions > 0
```

5. API Call Volume

The tool issues approximately **1 reporting request per day** (plus an optional manual backfill of up to 30 days, run rarely). Total daily operations are far below the Basic access limit of 15,000 operations/day. The tool does not poll continuously and contains no automated retry storms.

6. Authentication and Security

Authentication uses OAuth2 with credentials owned by PhoneSpot. The developer token, OAuth client ID/secret, and refresh token are stored server-side in Google Apps Script Script Properties and are never exposed to end users or embedded in client code. The OAuth user is an authorized user on our own Google Ads account. Access is limited to our own MCC (396-470-5146) and the ad accounts it manages.

7. Compliance

The tool is used only with Google Ads accounts that PhoneSpot owns and operates. It performs read-only reporting for internal performance measurement, in accordance with the Google Ads API Terms and Conditions and Required Minimum Functionality is not applicable because the tool is internal-only and does not manage campaigns on behalf of third parties.
